

cGov360™ Corporate Filing Management Platform

A filing software platform that fits your business workflows rather than adapting them to fit the software.

cGov360 is a state-of-the-art information system that embodies robust, configurable functionality to accommodate specific filing's workflow requirements identified by State Government jurisdictions.

cGov360 incorporates your specific business workflows and your unique Business Rules. It is customized to fit the informational needs of internal users as well as having a publicly available website. The website allows external users easy access to submit and search filings and publicly accessible data without burdening your staff. cGov360 also provides redaction, scanning and image attachment capabilities.

Security must always be a consideration when implementing technology solutions and cGov360 incorporates a flexible security model, allowing the inclusion of your security protocols. cGov360 provisions for an extensive set of external interfaces for both data consumers and data producers. cGov360 is extensible and scalable and uses either a Microsoft SQL or Oracle database.

Fundamentally
cGov360 delivers:

- **Intake:** Through Web, data entry and web services (B2B) customized to fit unique workflow requirements
- **Index and Validation:** Leveraging configurable business rules tuned to your requirements and modifiable by your IT personnel
- **Storage:** In the database, including PDF, TIF or other formats
- **Retrieval:** We enable your users to re-use data in the system for a variety of other purposes. Single-entry, multiple-use
- **Business Intelligence Reporting:** The ability to ask questions of the data and learn about the activities of both your customers and your organization in meaningful ways, leading to better insights, decisions and value. Ad hoc and pre-determined reports to meet your needs
- **Geospatial Visualization:** A map tool which enables you to overlay your data against common maps and get uncommon understanding
